*In cases of towns where there has been an abnormal movement of population, it is likely that the population estimates may not be sufficiently reliable for calculating the birth and death rates.

REMARKS

The figures of births and deaths shown in this statement for week ending the 28th July, 1956, relate to 228 towns with an estimated population of 30,954 thousands. The total number of towns is 318 and their population is 41,584 thousands. Thus 72% of the total number of towns representing 74% of the total population is covered in this statement. The number of births and deaths recorded in these towns were 18,611 and 7,927 representing birth and death rates of 31.3 and 13.3 per thousand of population respectively.

(a) *States (Part A and C).*—The data here relate to 180 towns with an estimated population of 24,167 thousands. Information about Assam, Delhi and West Bengal could not be included. The total number of towns is 253 and their population is 33,500 thousands. Thus 71% of the total number of towns representing 72% of the total population is covered. The number of births and deaths recorded in these towns were 15,433 and 6,594 representing birth rates

and death rates of 33.2 and 14.2 per thousand of population respectively. The table at the end gives the position by States.

No town recorded a high death rate of 50 or over per thousand of population.

(b) *States (Part B).*—The data here relate to 48 towns with an estimated population of 6,787 thousands. The total number of towns is 65 and their population is 8,084 thousands. Thus 74% of the total number of towns representing 84% of the total population is covered. The number of births and deaths recorded in these towns were 3,178 and 1,333 representing birth and death rates of 24.3 and 10.2 per thousand of population respectively.

No town recorded a high death rate of 50 or over per thousand of population.
